

## New Product Announcement:

### **K-4a** Audiology grade headphone for Pre-school and Primary students

We are so proud of this headphone. There is nothing else quite like it in the world. Our K-4 design is the direct result of interviews held with more than 40 elementary classroom teachers who kindly knocked holes in every existing headphone design I placed before them eight years ago. At the end of the sessions I had an enormously long list of things that were wrong with headphones and a very short list of things these teachers felt were needed in an educational headset for primary school children. K-4 is the manifestation of that short list. K-4A is a mono plugged audiology version of that headphone so small children who use Easy Listener and other FM listening systems can have a headphone that properly fits them. 12" ear lobe to ear lobe, K-4A is an ultra-durable headphone at a modest price. The audiology K-4A has 64ohm samarium cobalt based drivers driven in parallel to 32 ohms net impedance, a 1.0 meter round reinforced cable with 90 degree gold plated mono 3.5mm plug. The entire headphone is constructed of hypoallergenic materials to assure childrens' safety. As I said, we are really proud of this item.
